Uber Technologies, Inc. (UBER)

Watch list analysis, 2026-11-04 20:57 CET. Latest prices on 2026-11-04. Claude's notes updated 2026-11-04.

1. Summary

Q3 (Nov 4) was solid: gross bookings +20% to $59.8bn, non-GAAP EPS $0.88 (+35%), and Q4 guided to $0.95-0.99 (+34-39%). The stock rose about 5% to about $70, about 22x non-GAAP earnings, fair for growth this fast. View: a first look, not a full analysis yet. The proposed entry is 20x non-GAAP earnings, now about $62, some 11% below today.

Price	Adjusted P/E, 12m	10-year median P/E	Entry at 20x
$70.12	**22.5x**	**22.3x**	**$62.40** 11% below today's price

- **Cheap:** not quite; about 22x non-GAAP earnings, fair for EPS growth of 35-40% a year.
- **Strong:** operating income up about 30% a year, little capital spending (about $0.3bn a year) and modest net debt (about $10bn).
- **Weak:** reported EPS is dominated by tax releases and revaluations of its stakes, so the own-history P/E is not a reliable guide.
- **Uncertain:** whether robotaxis (Waymo, Tesla) bypass Uber's network or run on it.

3. Analysis

Adjusted P/E against its own 10-year history

Year	Average price	Adjusted EPS	P/E
Now (12m)	**$70.12**	**$3.12**	**22.5x**
2025	$84.70	$2.82	30.0x
2024	$70.77	$5.54	12.8x
2023	$41.78	$1.87	22.3x
2022	$29.35	-$0.05	–
2021	$48.61	-$0.36	–
2020	$35.51	-$3.55	–
2019	$35.54	-$3.84	–

Median of the yearly P/E: 22.3x over 10 years, 22.3x over the last 5.

Adjusted EPS: Yahoo's reported quarterly EPS (the basis analysts use, without amortization and one-offs), split-adjusted. Last four quarters, by report date: Feb 2026 $0.71, May 2026 $0.72, Aug 2026 $0.81, Nov 2026 $0.88. Full-year EPS is the trailing figure at the Q4 report; P/E uses the year's average price. The chart shows the daily price over the trailing adjusted EPS known that day. The 2025-11-04 quarter uses $0.65: excludes the $4.9bn tax valuation release and $1.5bn equity revaluation gain; Uber's own comparable figure, confirmed by its Q3 2026 release (+35% to $0.88). The 2026-02-04 quarter uses $0.71: Uber's non-GAAP EPS: excludes the $1.6bn equity revaluation loss. The 2026-05-06 quarter uses $0.72: Uber's non-GAAP EPS: excludes the $1.5bn equity revaluation loss. The 2026-08-05 quarter uses $0.81: Uber's non-GAAP EPS: excludes the $1.6bn equity revaluation gain (Delivery Hero, Aurora). The 2026-11-04 quarter uses $0.88: Uber's non-GAAP EPS: excludes the $476m equity revaluation loss, $484m of legal and regulatory reserves and $186m of restructuring (GAAP EPS $0.25).

Entry price

At 20x trailing adjusted EPS of $3.12, the entry price is **$62.40**, 11% below today's price. The 10-year range of yearly P/E is 12.8x to 30.0x (years of collapsed earnings, such as 2020, show very high P/Es).

Target: Proposed 2026-10-29, not yet confirmed by Babak: Uber has been profitable only since 2023 and its GAAP EPS is swung by tax releases and equity revaluations, so its own P/E history says little; 20x non-GAAP EPS, a discount for robotaxi risk to a business growing EPS 35-45% a year.

Business

Uber runs ride-hailing (Mobility), food and grocery delivery (Delivery) and Freight in about 70 countries. Q2 2026 revenue was about $14.2bn; GAAP income from operations rose about 30% to $1.9bn and non-GAAP EPS rose 35% to $0.81. Uber holds stakes in Didi, Grab, Aurora, Delivery Hero and others, whose revaluations swing GAAP EPS by about $1.5bn a quarter either way; Q3 2025 also included a $4.9bn tax benefit. The adjusted EPS here is Uber's non-GAAP EPS (see `eps_override` in the config): about $3.12 over the last 12 months (Yahoo's figure includes the GAAP swings). Uber has been profitable only since 2023, so the 10-year P/E history is short and distorted.

Risks

- **Autonomous vehicles:** robotaxi operators could build their own networks instead of using Uber's.
- **Competition:** DoorDash and Instacart in delivery, Lyft in US rides, local rivals abroad.
- **Regulation:** driver employment status, and taxes and rules in many countries.
- **Earnings quality:** large revaluation swings on its stakes in GAAP results.

News

- 2026-11-04: Q3 results: revenue $14.77bn (about $0.1bn above estimates); gross bookings +20% to $59.8bn; trips +16%; non-GAAP EPS $0.88 (+35%, a cent above consensus). GAAP EPS was $0.25 after a $476m equity revaluation loss, $484m of legal and regulatory reserves and $186m of restructuring. Q4 guide: gross bookings $63.25-65.25bn (+18-22%), non-GAAP EPS $0.95-0.99. About 700 driverless vehicles on the platform by year-end, over 2,000 in 2027. Buybacks slowed to $750m. The stock rose about 5% to about $70 (intraday).
- 2026-11-03: about $66.7 (intraday), little changed before tomorrow's report (Nov 4, before the US open).
- 2026-11-02: about $66.5 (intraday: since the US clocks changed on Nov 1, Wall Street closes at 22:00 Italy time, after this run), ahead of Wednesday's report (Nov 4, before the US open). Consensus non-GAAP EPS about $0.86-0.94 against guidance of $0.84-0.88; gross bookings guided at $58.25-60.25bn (+18-22% in constant currency).
- 2026-10-30: about $65.3, near a fresh 52-week low on robotaxi fears, ahead of Wednesday's (Nov 4) report. Consensus non-GAAP EPS is about $0.86-0.94 against guidance of $0.84-0.88; revenue is expected near $14.7bn.
- 2026-08-05: Q2 results: revenue about $14.2bn (just below the estimate), non-GAAP EPS of $0.81 in line; GAAP EPS of $1.17 included a $1.6bn revaluation gain. Q3 non-GAAP EPS guidance of $0.84-0.88 was below the $0.89 consensus.
- 2026-05-06: Q1 non-GAAP EPS of $0.72, up 44%; GAAP EPS of $0.13 after a $1.5bn revaluation loss.

What to watch

- Q4 results in early February 2027: non-GAAP EPS against the $0.95-0.99 guide, and the 2027 outlook.
- Robotaxi partnerships and how much of the ride is Uber's.
- Gross bookings growth in Mobility and Delivery.

Caveats

- Yahoo data is unofficial; capex can include acquisitions or stakes, so check SEC capex.
- The peer group is hand-picked, so the weighted scores depend on it.
- Claude's notes are dated above and may be older than the numbers.
